Develop faster. Run anywhere.

Build with the **#1** most-used developer tool

[Download Docker Desktop](#)[Learn more about Docker](#)

Accelerate how you build, share, and run applications

Docker helps developers build, share, run, and verify applications anywhere — without tedious environment configuration or management.

Build

Spin up new environments quickly

Accelerate your development by building Docker images locally or in the cloud with Docker Build Cloud. Create multiple containers using Docker Compose without the hassle of local build constraints.

Integrate with your existing tools

Docker seamlessly integrates with your development tools, such as VS Code, CircleCI, and GitHub. Meanwhile, Docker Build Cloud fast-tracks build times, resulting in an enhanced workflow without disruption.

Containerize applications for consistency

Ensure consistent application performance across any environment, whether it's on-premises Kubernetes or cloud platforms like AWS ECS, Azure ACI, and Google GKE.

Optimize builds with Docker Build Cloud

```

Build Cloud

+ (docker/cli) docker buildx build --target binary --platform local --output build/ .
[+] Building 3.6s (26/26) FINISHED                                cloud:cloud-docker-default
=> [internal] connected to docker's cloud service                0.0s
=> => note: cloud builds are currently in beta                  0.0s
=> [internal] load build definition from Dockerfile              0.1s
=> => transferring dockerfile: 5.56kB                            0.1s

New to containers?

We got you covered! Get started with the basics with our guide to containers, including what they are, their advantage over virtual machines, and more.

[Read the container guide](#)

Meet the community

Stop by any of the hundreds of meetups around the world for in-person banter or join our Slack and Discourse for virtual peer support. Our Docker Captains are also a great source of developer insight and expertise.

[Connect with us](#)

Join our open source program

Our Docker-Sponsored Open Source program is ideal for developers working on non-commercial projects.

[Apply today](#)

Develop from code to cloud with partners that you trust

Our partnerships ensure that your development pipeline network will work in your preferred environment — whether local or in the cloud.

[Our trusted partners](#)

Simplify the development of your multi-container applications from Docker CLI to Amazon EKS and Serverless.

Seamlessly bring container applications from your local machine and run them in Azure Container Instances.

Easily distribute and share Docker images with the JFrog Artifactory image repository and integrate all of your development tools.

Integrate with your favorite tools and images

**Your path to accelerated
application development
starts here.**

Download Docker

Learn how to install Docker for Mac, Windows, or Linux and explore our developer tools.
